

# 2005 EXCELLENCE IN HOT-DIP GALVANIZING DUPLEX SYSTEMS

PRIVATE  
RESIDENCE ~  
TUSCAN TERRACE  
Boston, MA

Having extensive experience with hot-dip galvanizing on other architectural projects, this homeowner insisted that all exposed steel be galvanized and then painted, for a duplex coating that was a critical component in the architectural statement of this home.

A wide variety of steel thickness and structural shapes—such as reinforcing steel, tube, and mesh, comprising the structure—made this a technically-challenging project that required the teamwork of the architect, fabricator, and galvanizer to successfully deliver the highest-quality coating. Fittingly, the end-product delivered the intended result of replicating the feeling of an outdoor Tuscan terrace perched high in the Mediterranean.
