

# GALVANIZING OUR WORLD

Food & Agriculture

From the hot fields and barns to the cold, refrigerated rooms, hot-dip galvanized steel weaves throughout the agriculture and food processing sector. Both of these industries operate in a variety of environments and are exposed to a multitude of potentially corrosive elements. Hot-dip galvanized steel provides the right mix.

The agriculture business is unforgiving; often requiring around the clock work. Similarly, the steel used throughout this sector needs constant corrosion protection. Hot-dip galvanizing can withstand the wear and tear of animals as well as the changing seasons and needs.

Hot-dip galvanized steel is also a mainstay in food and beverage processing facilities. Utilized in conveyor castings, chains, and supports, as well as storage racks and shelves due to its limited maintenance and ease of cleaning, hot-dip galvanizing combats corrosion for decades. Corrosion can create an unsafe and dangerous environments for the food handling as well as employees. The natural zinc coating of hot-dip galvanized steel protects both the structure and the products for decades. ## Food & Agriculture Utilizing HDG

Allen Canning Company

Buffalo Wild Wings

Fair Oak Farms

Hoosier Pride Egg Farm

Lazy Magnolia Brewery

Leprino Foods

Ocean Spray Receiving Station

Petone Elevator

Prairie View Dairy

Valmont Irrigation Systems

## Common HDG Food & Agriculture Products

Equipment Hooks & Supports

Feeding Equipment

Farm Buildings & Implements

Grain Hoppers & Conveyors

Grain Elevators

Growing Racks

Stanchions

Silo Extraction Equipment

Slotted Floors

Storage Racks/Refrigeration Shelves

Substation Structures

Trailers

Vegetable Washing Machine

Veterinary Equipment

Waste Handling Equipment

Watering Troughs
